Special lamps with LED-technology

The early and forward-looking decision not to follow the universal trend, but rather individual demands for design and technology was the basis for the success that continues to this day. The wide variety of different designer lamps, each dominating in its respective technological content, was obvious right from the first very product following the company‘s foundation.

All of our lamp models‘ components are produced in our factory from brass using traditional armoury metalworking. This is done with meticulous craftsmanship, from the selection of the raw materials to their processing right down to the surface treatment. To top it off, each component then receives its own colour treatment.

The surface colors burnished and 24ct gold-plated, polished or matt, are also possible in-house.

In our manufactory near Munich, we are able to do everything Responding to your customers‘ wishes. The technical and design requirements result from the dialogue with our customer.
The customer is the creator.

Light for the future®

True to its company slogan – Light for the Future® – betec has enjoyed an excellent international reputation as an innovative lamp manufacturer for 40 years.

Its founder and chief designer Horst Lettenmayer, as chairman of the board, is leading the company together with his successor, Ms Julia-Alina Lettenmayer, as a board member, into a new age of lighting.

From consulting to planning with technical drawings to sample production, we are at your disposal.
