

## Mounting Instructions "Angulus" Duo LED

**CAUTION!** The electrical lamps have to be mounted without current and by cold state only by a specialist. Also the change of the bulbs has to be made in this state.

First, screw the bracket without the cable onto one side of the light profile.

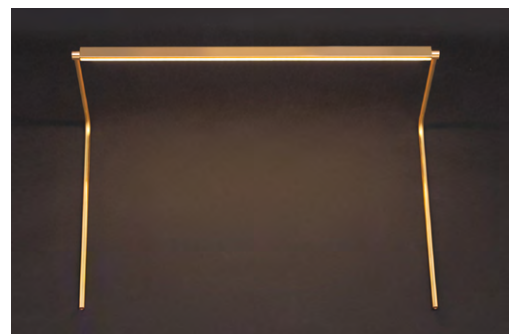

Push the light cable into the second bracket and screw the bracket onto the light profile as well.

Then fasten the EVG and have a qualified electrician clamp the 230V primary side electrical connector.

Mount the light with the brackets on the photo frame back.

By turning the light profile, you can now set the position of the edge of the light in relation to the picture. By sliding the light back and forth inside the back side clamp, you can set the levels and distance of the lights relative to the picture frames.
