The Manufactory

The early decision not to follow universal trends but instead focus on individual design and technological requirements was the foundation of the enduring success of the Betec lighting manufactory. Our ongoing efforts to produce lights as handcrafted, unique pieces, consider customers' personal wishes, and use selected materials reflect our respect for our clients. Whether in the hospitality sector or private homes, our primary goal is to create harmony — be it with modern or classical stylistic elements.

Our production near Munich

The Tradition

Betec was founded in 1978 by Horst Lettenmayer with the passion and goal of creating extraordinary designer lights. Each light is the result of years of experience, artisanal precision, and creative dedication. His aim was always to strike the perfect balance between technology, functionality, and art. His vision lives on in every single piece.

Horst Lettenmayer 31.07.1941 - † 20.07.2024

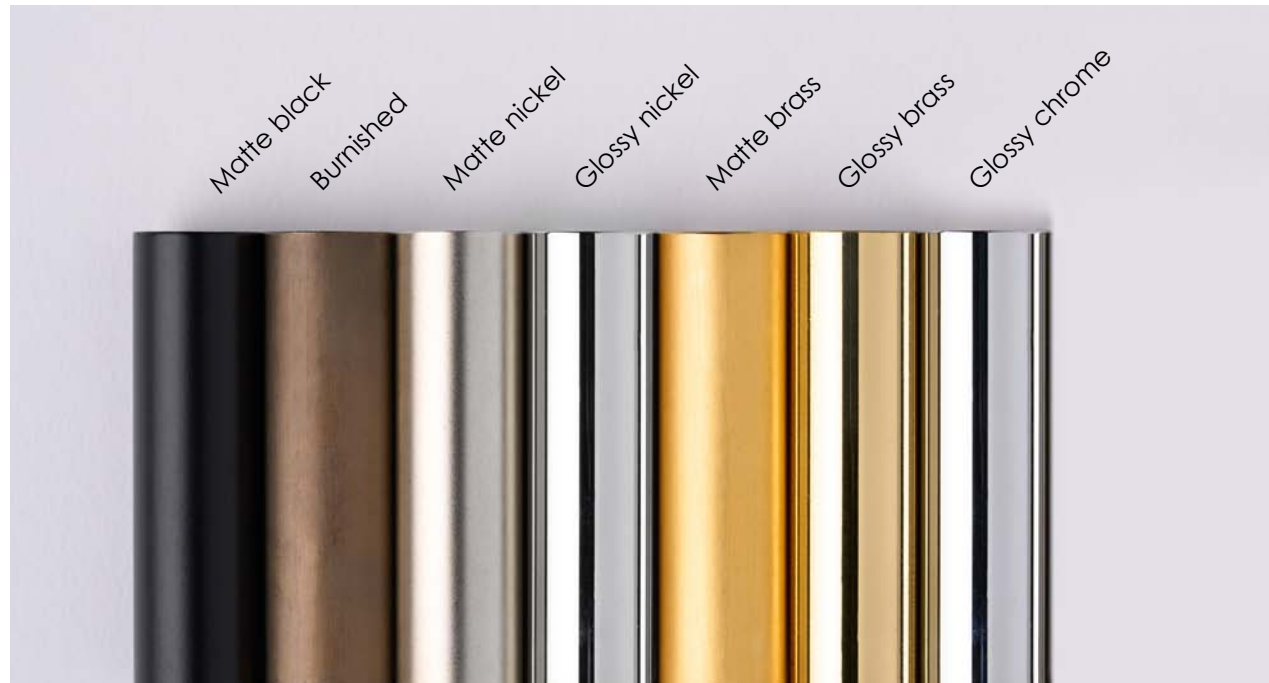

Julia Alina Lettenmayer

In late 2024, his daughter, Julia Alina Lettenmayer, took over leadership and is now dedicated to introducing you to the exceptional world of our lighting manufactory. Preserving the traditions and values that have defined our company since its inception is her heartfelt mission.

Surfaces

The components of all our picture light models are crafted in our manufactory using traditional brass craftsmanship. From selecting raw materials to processing and surface treatment, we ensure meticulous artisanal care. As a finishing touch, every component undergoes its surface treatment. Electroplating processes are conducted in a Munich-based facility, which maintains the highest quality standards. All coatings are hand-lacquered and baked at 180°C. Timeless design should also ensure timeless durability.

Other colors available on request.

In this brochure, we aim to give you insight into the fascinating world of our handcrafted lights and how they can help to enhance the atmosphere and character of your space.

Our lights stand for more than just illumination — they create an ambiance that captivates your guests.

The individually designed lights give your spaces a unique radiance.

Experience how our lights don't just serve as light sources - they are artistic accents.

In our portfolio we offer you various bracket versions in different sizes, suitable for every work of art and every room.

Clarus[®]

This painting light, Clarus, was developed in 1978 by Horst Lettenmayer in Munich. Designed with an extremely minimalistic aesthetic, the focus is solely on highlighting the art through the light output. A warm curtain of light covers valuable paintings, making the artwork shine. Even today, this light is handcrafted and now fitted with LED technology. Over time, the light itself has become an art object. **It was awarded art protection in 1987 by the Munich Higher Regional Court.** The painting lights can be electrically connected to extend their length and illuminate paintings spanning several meters.

Mono[©]

For small pictures or photos, the Mono LED picture light with a single central bracket is an excellent choice. Despite its compact size, it offers high light output. The light can be mounted either on the back of the picture frame or directly on the wall.

Angulus®

For modern picture frames, this light complements the harmony between light and art. The lighting profile (17x17 mm) is rotatable, allowing the optimal light plane to be adjusted. Years of experience have led to the extension of the brackets to increase the light's distance from the painting. Additionally, the light output of this model has been doubled to adequately illuminate larger areas. For comfortable, glare-free lighting, this model is equipped with a matte diffuser cover.

Minimus[®]

As an extension of the „Clarus“ model, the „Minimus“ was designed with a similar aesthetic but features a larger tube diameter (Ø 18 mm). This choice doubles the brightness, making it ideal for taller artwork or frames with thicker profiles. Suggested applications include: picture lighting, shelf lighting (type 30), or wall lighting (type 10).

Maximus[®]

For illuminating large paintings with heavy frames, a larger model is required to balance the proportions between the artwork and the lighting fixture. This led to the creation of the Maximus picture light, capable of covering picture widths of up to two meters without coupling. However, coupling brackets allow the light to be extended as needed. Since large paintings often have significant height, it is necessary to maximize the angle of light projection to reach the bottom of the artwork. The light tube is rotatable and comes with a matte diffuser cover.

Galerie-Rail-System[®]

This low-voltage rail system frees art lovers and painting collectors from the hassle of wall damage. Even fabric-covered walls remain unscathed when paintings are occasionally rearranged. Measuring 36x13 mm, the profile can be installed around the perimeter of a room, requiring only one power supply from an electronic ballast for the entire system. The system supports LED picture lights with a total output of 240W at 24V. Suspension pendants are available in lengths ranging from 1 to 3 meters.

Ductus[©]

Image rights: Hotel Radisson Santa Sofia Milano

Our desk and wall light is crafted with the utmost precision. It is ideal for illuminating lecterns, menu displays, and showcases. The integrated mounting socket can be installed in material thicknesses ranging from 5 to 45 mm with a Ø 18 mm hole. Thanks to the patented push-fit connector, the light tube can be removed when the power circuit is disconnected (to prevent theft or vandalism). For wall-mounted versions, suitable mounting options such as a mounting rosette are also available.

Piano®

An organist needs proper lighting for sheet music. This light offers a solution for attachment to valuable instruments.

The light is height-adjustable, mounted on a flocked board that serves as a music stand. A single power connection is located on the bass side of the keyboard. By unplugging the connector, the board with the light can be removed easily, allowing the grand piano to be closed. The light tube is rotatable, and the brightness can be adjusted by the pianist using the dimming sphere on the board.

The choice of materials and meticulous craftsmanship are the key to each of our lights.

Our lights can be found worldwide in museums, hotels, and exclusive restaurants.
On this page, we present a selection of our successfully implemented projects and how our lights contribute
to shaping the atmosphere and style of exceptional spaces.

Clarus conversion kit

The EU Lamp Regulation affects both the 100W-80W incandescent lamp and small lamps.
In this context, we would like to point out that we can no longer acquire the following festoons:

12V, 5W / 15V, 5W / 18V, 5W / 24V, 5W / 48V, 5W

For reasons of increased light efficiency and a significantly increased lifespan of 50,000 hours, we will retrofit your picture lights that have festoon lamps using versions of the latest LED technology. Increased luminous efficacy with only 10% of the previous electricity consumption, without the lamp or the object heating up.

Illuminant: LED, lifespan: up to 50.000 hours, LED-CEE: F, primary voltage: 220V-240V, secondary voltage: DC 24V, 20W ballast unit: 94x36x18 mm

Clarus kit prices plus VAT

Light length	Incandescent bulbs	Article number	Price
265 mm	5 x 48V	51UB26MN24	122 €
475 mm	10 x 24V	51UB47MN24	143 €
595 mm	13 x 18V	51UB59MN24	156 €
725 mm	16 x 15V	51UB72MN24	183 €
900 mm	20 x 12V	51UB90MN24	202 €

Ballasts (230V EU Standard)

		Preise
230V Phase cut dimmable driver	90VD24LD20	39 €
110V Phase cut dimmable driver	90VD11LD20	39 €
Touch-Dimmer Module	50TD01LD24	67 €
230V DALI	90DD24LD20	95 €
Casambi App Controller	90CA02LD24	154 €

Standard delivery scope

LED light source, contact spring,
brass contact stone, dimmable ballast.

!

For safety reasons, retrofittings may
only be carried out by electrical
industry specialists.
Therefore, you should send your
lamp to us for retrofitting.

Awards

We are proud to present the awards that recognize our passion
for craftsmanship, quality, and innovative design.

These honors are a testament to our work and a motivation to
continue creating exclusive luminaires that combine
functionality and aesthetics.

Our heartfelt thanks also go to our partners and customers who
accompany us on this journey and share our vision.

Thank you
for your attention
